SUMMARY

DevOps-focused Software Engineer with hands-on experience in infrastructure automation, CI/CD pipelines, and cloud-native development. Strong foundation in Docker, Kubernetes, Terraform, and AWS.

EDUCATION

FAST National University of Computer and Emerging Sciences (NUCES) Peshawar, Pakistan
Bachelor of Science in Software Engineering Expected May 2026

EXPERIENCE

Backend Developer Intern Dec 2025 – Jan 2026

DevsInc

Remote

- Refactored Python backend from traditional architecture to Pydantic AI agents with Google Ads API integration
- Implemented Logfire telemetry and monitoring for production observability and performance tracking
- Developed and integrated Google Ads API endpoints for competitive landscape insights platform
- Improved code quality and maintainability using modern Python patterns and AI-driven development

Private Tutor (C++ and Python) 2023 – 2025

Home Tuition

- Taught C++ & Python to 10+ students with focus on OOP and problem-solving
- Improved student performance by 40% through structured exercises and testing

Software Documentation Specialist (Academic Project) 2024

Peshawar Tourism Department

Peshawar, Pakistan

- Created full Software Requirements Specification (SRS) for tourism system
- Designed UML diagrams, use cases, and stakeholder analysis for real-world system

PROJECTS

AutoReturn – AI Intelligence Hub | *Python, PySide6, spaCy, Ollama, Gmail/Slack APIs* | [GitHub](#) 2025

- Built AI Intelligence Hub with Orchestrator-Agent architecture for Gmail/Slack integration
- Implemented 4-Part Priority Algorithm using spaCy NLP with 80% accuracy
- Created AI Task Classification and Calendar Event Extraction with .ics export
- Packaged as AppImage/DEB for Linux with CI/CD pipeline

FairGig | *Next.js, FastAPI, Docker/K8s, Terraform/Ansible, Prometheus/Grafana, AWS EKS* | [GitHub](#) 2025

- Architected 6-service microservices platform with Docker/K8s orchestration
- Built CI/CD pipeline with GitHub Actions for zero-downtime deployments to AWS EKS
- Provisioned AWS infrastructure with Terraform IaC; implemented HPA auto-scaling
- Added full observability with Prometheus/Grafana and server automation with Ansible

Bookstore Microservices | *Node.js, Next.js, MongoDB, Docker, K8s, Prometheus/Grafana/Loki* | [GitHub](#) 2025

- Built microservices bookstore with API Gateway, JWT auth, and Docker/K8s deployment
- Implemented monitoring with Prometheus/Grafana and CI/CD pipeline via GitHub Actions

ACHIEVEMENTS

Participated in SOFTEC'26 Web Development competition

Secured 4th position in CTF cybersecurity competition

Performed static analysis on 40k lines of UNIX V6 source code

TECHNICAL SKILLS

Languages: Python, Bash, JavaScript, TypeScript, Rust, SQL

Backend: Node.js, FastAPI

Frontend: React, Next.js

DevOps: Docker, Kubernetes, Terraform, Ansible, GitHub Actions, AWS

Monitoring: Prometheus, Grafana

Databases: PostgreSQL, MongoDB

Concepts: Microservices, CI/CD, IaC, System Design
